

Molded 300 x 150 Blue Brute® Hammer Tee

IPEX is proud to announce the addition of a 300 x 150 Blue Brute® Hammer Tee, a tangential tee for hydrant leads off watermain, to the Blue Brute fitting product offering. The unique branch geometry of this tee, which is from the centre of the fitting, allows any entrapped air in the main line to flow out through the branch, enhancing pipeline performance.

The fitting reduces material and labour costs by eliminating the need for a hydrant tee and 45° elbow to bleed air out of fire hydrant connections.

Blue Brute® Hammer Tee

Part Number	Size	Description
373249	12" x 6" (300mm x 150mm)	Blue Brute® Hammer Tee (BxBxB)

Feature & Benefits:

- Permits release of entrapped air from 300 mm watermain
- Light weight, resulting in easier installation
- Corrosion proof, made of PVC that will not corrode in aggressive soils
- Made in compliance with AWWA C907 and certified to CSA B1372 for Molded PVC Pressure Fittings
- Certified to UL 1285 and FM 1612 for underground fire services

Standard:

B137.2

3660-950

Certified to
NSF/ANSI 61-G
