

NEW PRODUCT SHOWCASE

New Molded 8" Bell End Fitting

The new Scepter 8" Molded Bell End fitting replaces the current fabricated part for a consistent product that is lighter and easier to use. Contractors will appreciate the new design that includes smooth interior lines for pulling wires in utility vaults, substations and renewable energy collectors.

Made from Schedule 40 Rigid PVC, Scepter End Bells are flared at one end to provide a smooth, rounded pulling surface preventing damage to cables.

Size (in.)	Part Number	New Product Code	Old Product Code	OD (in)	OL (in)
8	EB-80	277094	77652	13	5.8

FEATURES

- Shorter length than fabricated end bells for easier installation in vaults
- Provides a smooth radius and transition for medium voltage cable
- Molded not fabricated for a consistent product
