IPEX DK Series Pneumatic Diaphragm Valves are the ideal solution for modulating flow and controlling dirty or abrasive fluids in a variety of applications. The modular nature of this valve results in many material, body style, and diaphragm options. The re-designed weir-style body has significantly improved the DK's flow rate compared to the old design and it facilitates precise linear flow regulation through the valve's full range of operation. This pneumatically actuated version provides automatic control with an extensive range of options and accessories.

VALVE AVAILABILITY

Body Material:	PVC, CPVC, PP, PVDF
Size Range:	1/2" through 2-1/2"
Pressure:	150 psi
Diaphragm:	EPDM, FKM or PTFE (EPDM backed)
Control Style:	Pneumatically Actuated (Double Acting, Normally Open, Normally Closed)
End Connections:	Spigot, True Union (Socket, Threaded) Flanged (ANSI 150)

DK Series Pneumatic Diaphragm Valves

Submittal Data Sheet

Sample Specification

1.0 Diaphragm Valves – DK Pneumatic

1.1 Material

- The valve body, including end connectors and unions, shall be made of PVC compound which shall meet or exceed the requirements of cell classification 12454 according to ASTM D1784.
- or The valve body, including end connectors and unions, shall be made of Corzan® CPVC compound which shall meet or exceed the requirements of cell classification 23447 according to ASTM D1784.
- or The valve body, including end connectors and unions, shall be made of stabilized PP homopolymer compound, also containing a RAL 7032 pigment, which shall meet or exceed the requirements of Type I Polypropylene according to ASTM D4101.
- or The valve body, including end connectors and unions, shall be made of virgin, non-regrind PVDF compound which shall meet or exceed the requirements of Table 1 according to ASTM D3222.
- The pneumatic valve bonnet assembly shall be made of high temperature, high strength, glass-filled polypropylene (GFPP).

1.2 Diaphragm

- The diaphragm shall be made of EPDM.
- or The diaphragm shall be made of FKM.
- or The diaphragm shall be made of PTFE (backed with EPDM).

2.0 Connections

2.1 Spigot Style

- The IPS spigot PVC end connectors shall conform to the dimensional standard ASTM D1785.
- or The IPS spigot CPVC end connectors shall conform to the dimensional standard ASTM F441.
- or The Metric spigot PP end connectors shall conform to the dimensional standard ISO 3609.
- or The Metric spigot PVDF end connectors shall conform to the dimensional standard ISO 10931.

2.2 Socket Style

- The IPS socket PVC end connectors shall conform to the dimensional standards ASTM D2466 and ASTM D2467.
- or The IPS socket CPVC end connectors shall conform to the dimensional standard ASTM F439.
- or The Metric socket PP end connectors shall conform to the dimensional standard ISO 3609.
- or The Metric socket PVDF end connectors shall conform to the dimensional standard ISO 10931.

2.3 Threaded Style

- The female NPT threaded PVC end connectors shall conform to the dimensional standards ASTM D2464, ASTM F1498, and ANSI B1.20.1.
- or The female NPT threaded CPVC end connectors shall conform to the dimensional standards ASTM F437, ASTM F1498, and ANSI B1.20.1.

2.4 Flanged Style

- The ANSI 150 flanged PVC end connectors shall conform to the dimensional standard ANSI B16.5.
- or The ANSI 150 flanged CPVC end connectors shall conform to the dimensional standard ANSI B16.5.
- or The ANSI 150 flanged PP end connectors shall conform to the dimensional standard ANSI B16.5.
- or The ANSI 150 flanged PVDF end connectors shall conform to the dimensional standard ANSI B16.5.

DK Series Pneumatic Diaphragm Valves

Submittal Data Sheet

Sample Specification, continued

3.0 Design Features

- All valves shall be weir-style for throttling applications.
- 1/2" and 3/4" valves shall have a standard optical position indicator to allow for a visual check of the valve position.
- 1/2" and 3/4" valves shall have a custom labelling plate housed in a transparent cap.
- All through bolts shall be made of stainless steel.
- The valve shall incorporate a feature that allows an identification tag to be easily affixed to the valve body.
- Bodies of PVC, CPVC and PP valves shall have brass mounting inserts.
- Bodies PVDF valves shall have stainless steel mounting inserts.

3.1 Actuators

- All actuators shall be made of high strength glass-filled polypropylene (GFPP).
- Actuators shall be piston style.
- Actuators shall have 6 independent cartridge springs arranged radially to uniformly distribute the load on the piston.
- The following accessories shall be available for all actuators: position indicator, stroke limiter, stroke limiter with position indicator, limit switch, limit switch box, 3-15 psi positioner, 4-20 mA positioner, pilot solenoid valve.

3.2 Pressure Rating

- All valves shall be rated at 150 psi at 73°F.

3.3 Markings

- All valves shall be marked to indicate size, material designation, and manufacturers name or trade mark.

3.4 Colour Coding

- All PVC valves shall be colour-coded dark gray.
- or All CPVC valves shall be colour-coded light gray.
- or All PP valves shall be colour-coded beige gray.
- or All PVDF valves shall not be colour-coded and be white in appearance.
- All bonnet assemblies shall be colour-coded black.

- **4.0** All valves shall be Xirtec® PVC, Xirtec® CPVC, PP or PVDF by IPEX or approved equal.

Contact IPEX for availability of spare components for Spigot and Flanged style valves.

DK Series

Pneumatic Diaphragm Valves

Submittal Data Sheet

Installation Procedures

1. The valve may be installed in any position or direction.
2. Please refer to the appropriate connection style subsection:
 - a. For spigot style, solvent cement each pipe onto the ends of the valve body. **Ensure that excess solvent does not run into the body of the valve.**
 - b. For true union style, remove the union nuts and slide them onto the pipe.
 - i. For socket style, solvent cement the end connectors onto the pipe ends. For correct joining procedure, please refer to the section entitled, "Joining Methods – Solvent Cementing" in the IPEX Industrial Technical Manual Series, "Volume I: Vinyl Process Piping Systems". **Ensure that excess solvent does not run into the body of the valve. Be sure to allow sufficient cure time before continuing with the valve installation.**
 - ii. For threaded style, thread the end connectors onto the pipe ends. For correct joining procedure, please refer to the section entitled, "Joining Methods – Threading" in the IPEX Industrial Technical Manual Series, "Volume I: Vinyl Process Piping Systems".
 - iii. Ensure that the socket o-rings are properly fitted in their grooves then carefully place the valve in the system between the two end connections.
 - iv. **Tighten both union nuts. Hand tightening is typically sufficient to maintain a seal for the maximum working pressure. Over-tightening may damage the threads on the valve body and/or the union nut, and may even cause the union nut to crack.**
 - c. **For flanged style, join both flanges to the pipe flanges. For correct joining procedure, please refer to the section entitled, "Joining Methods – Flanging" in the IPEX Industrial Technical Manual Series, "Volume I: Vinyl Process Piping Systems".**
3. If anchoring is required, fix the valve to the supporting structure using the wall/panel mounting kit.
4. Connect any accessories then a suitable air supply and pilot system to the actuator. Be sure to check that both the working and control pressure are in accordance with the specifications.

DK Series

Pneumatic Diaphragm Valves

Submittal Data Sheet

Disassembly

1. If removing the valve from an operating system, isolate the valve from the rest of the line. Be sure to depressurize and drain the valve and isolated branch.
Depressurize and disconnect the pneumatic control line before continuing with disassembly.
2. If necessary, detach the valve from the support structure by disassembling the wall/panel mounting kit attached to the bottom of the valve body (8).
3. Please refer to the appropriate connection style subsection:
 - a. For spigot style, cut the pipe on either side of the valve and remove from the line.
 - b. For true union style, loosen both union nuts and drop the valve out of the line. If retaining the socket o-rings (9), take care that they are not lost when removing the valve from the line.
 - c. For flanged style, loosen each bolt holding the valve to the pipe flanges. Please refer to the section entitled, "Joining Methods - Flanging" in the IPEX Industrial Technical Manual Series, "Volume I: Vinyl Process Piping Systems" for a recommended bolt tightening pattern diagram. Follow the same pattern when disassembling the flanged joints then carefully remove the valve from the line.
4. Remove the protective caps (14), then loosen and remove the bolts (13) and washers (12) from the bottom of the valve body.
5. Separate the valve body (8) from the actuator (1 or 4).
6. Unscrew the diaphragm (7) and remove the compressor (6).
7. The valve components can now be checked for problems and/or replaced.

Note: All operations on equipment under pressure or containing compressed springs must be carried out under safe conditions for the operator. For safety reasons, it is not recommended to attempt to disassemble the actuator.

Assembly

Note: Before assembling the valve components, it is advisable to lubricate the o-rings with a water soluble lubricant.

Be sure to consult the "IPEX Chemical Resistance Guide" and/or other trusted resources to determine specific lubricant-rubber compatibilities.

1. Insert the compressor (6) on the actuator stem (1 or 4) aligning it correctly in its housing.
2. Screw the diaphragm (7) on the stem, aligning it correctly with its housing on the actuator.
3. Mount the actuator (1 or 4) on the valve body (8) and tighten the bolts (13) and washers (12).
4. Tighten the bolts (13) in an even (cross-like) pattern, ensuring that recommended tightening torque found on the instruction sheet is followed.
5. Replace the protection caps on the bolt heads (14).
6. Reconnect the valve to the pneumatic and electrical connections.

Note: All operations on equipment under pressure or containing compressed springs must be carried out under safe conditions for the operator. For safety reasons, it is not recommended to attempt to disassemble the actuator.

Submittal Data Sheet

Testing and Operation

The purpose of system testing is to assess the quality of all joints and fittings to ensure that they will withstand the design working pressure, plus a safety margin, without loss of pressure or fluid. Typically, the system will be tested and assessed in sub-sections as this allows for improved isolation and remediation of potential problems. With this in mind, the testing of a specific installed valve is achieved while carrying out a test of the overall system.

An onsite pressure test procedure is outlined in the IPEX Industrial Technical Manual Series, "Volume I: Vinyl Process Piping Systems" under the section entitled, "Testing". The use of this procedure should be sufficient to assess the quality of a valve installation. **In any test or operating condition, it is important to never exceed the pressure rating of the lowest rated appurtenance in the system.**

Important points:

- **Never test thermoplastic piping systems with compressed air or other gases including air-over-water boosters.**
- When testing, do not exceed the rated maximum operating pressure of the valve.
- Avoid the rapid closure of valves to eliminate the possibility of water hammer which may cause damage to the pipeline or the valve.

Please contact IPEX customer service and technical support with regard to any concern not addressed in this data sheet or the technical manual.

DK Series Pneumatic Diaphragm Valves

About IPEX

About the IPEX Group of Companies

As leading suppliers of thermoplastic piping systems, the IPEX Group of Companies provides our customers with some of the world's largest and most comprehensive product lines. All IPEX products are backed by more than 50 years of experience. With state-of-the-art manufacturing facilities and distribution centers across North America, we have established a reputation for product innovation, quality, end-user focus and performance.

Markets served by IPEX group products are:

- Electrical systems
- Telecommunications and utility piping systems
- Industrial process piping systems
- Municipal pressure and gravity piping systems
- Plumbing and mechanical piping systems
- Electrofusion systems for gas and water
- Industrial, plumbing and electrical cements
- Irrigation systems
- PVC, CPVC, ABS, PE, PEX, PVCO, PP and PVDF pipe and fittings (1/2" to 60")

Xirtec® is a registered trademark used under license.
Xirtec® CPVC piping systems are made with Corzan® CPVC compounds.
Corzan® is a registered trademark of the Lubrizol Corporation.
